

GLOBE

August 1, 2005

Welcome.

A purpose of this 'GLOBE' is to promote global safety and health by means of exchanging information about knowledge and technology in this field, together with our worldwide members.

Risk information is the most basic tool to reduce health and survival risk in our earth. We hope that the GLOBE will provide global risk communication among different nations, cultures and societies, to promote our better life, science and technology. Global, speed and dialogue are the key concepts of the GLOBE.
